

Jeet V. Doshi

Technical Account Manager — Intelligent & Agentic Automation

Bengaluru, Karnataka, India · +91 8080318584 · jeet.doshi2091@gmail.com · linkedin.com/in/jeet-doshi-28408071 · jdoshi2091.hashnode.dev

Technical Account Manager with eleven years in software and eight in enterprise automation, currently owning the technical relationship for UiPath programmes at WonderBotz. Background is hands-on: twenty-plus live processes across NHS England and its secondary trusts, UiPath infrastructure and CI/CD built on Azure, and a year on client site in the UK as development lead. Current focus is agentic automation — coding agents, MCP servers, Coded Apps, and the governance that decides whether any of it reaches production. Writes and speaks regularly for the UiPath community.

Core skills

Automation platform	UiPath Studio, Orchestrator, Action Center, Coded Apps, Data Fabric, Computer Vision, SAP automation, Microsoft Power Platform
AI and agents	Claude Code, OpenAI Codex, MCP servers, agent skills, prompt engineering, agentic workflow design, human-in-the-loop patterns
Cloud and DevOps	Azure IaaS and PaaS, Azure Functions, ARM templates, Azure DevOps CI/CD, YAML, PowerShell, GitHub, TFS
Engineering	C#, .NET Framework, ASP.NET MVC, ADO.NET, LINQ, WinForms, WCF, TypeScript, React, Vite, JavaScript, Python, SQL Server, SQLite, Oracle
Delivery	Automation solution design, test approach and operational manuals, technical feasibility, client demos, code review, impact analysis, mentoring, line management

Experience

Line Manager — Technical Account Manager WonderBotz · Bengaluru, India	Apr 2025 — Present
- Own the technical account relationship for enterprise intelligent automation customers, from solution shaping and feasibility through delivery assurance and ongoing platform health. - Line-manage a technical team while staying hands-on with solution design and platform engineering. - Design and prove agentic patterns on the UiPath platform: coding agents that generate workflows and apps, MCP servers, reusable agent skills, and Coded Apps built in React and TypeScript. - Solve platform problems surfacing in live programmes — including a log-bridging pattern that returns external Python and PowerShell execution logs to the UiPath job trail, restoring observability for support teams. - Publish open-source utilities and long-form technical articles used across the UiPath community.	
Senior Consultant — Technical Account Manager, Intelligent Automation WonderBotz · India	Jan 2024 — Apr 2025
- Technical ownership across intelligent automation engagements: feasibility assessment, solution design, estimation and delivery assurance. - Ran client demos, technical workshops and show-and-tell sessions taking opportunities from idea to agreed scope. - Set delivery standards and reviewed automation designs against UiPath best practice.	
Software Specialist I — Delivery Mastek · Reading, United Kingdom (Jul 2022 – Aug 2023), then Navi Mumbai, India	Jul 2022 — Jan 2024
- Deployed to client site in Reading as client-facing RPA development lead for NHS England and secondary trusts, working directly with business and IT stakeholders. - Produced Automation Solution Designs, test approaches and operational manuals for processes entering support. - Continued delivery, code review and impact analysis across the process estate after returning to India.	
Senior Software Engineer Mastek · Navi Mumbai, India	May 2018 — Jul 2022
- Delivered 20+ automated processes across NHS trusts in teams of four to ten, automating ServiceNow, Oracle SBS, Oracle BI, HealthRoster, SystemOne, CareNotes, Lorenzo, ESR, Trac, LMS and eRS. - Built UiPath infrastructure on Azure from marketplace ARM templates, hosting a multi-tenant RPA environment shared by several providers. - Created Azure DevOps CI/CD pipelines deploying automation packages directly to Orchestrator, cloud VMs or local machines; wrote the PowerShell behind template deployment and tenant creation. - Ran R&D on UiPath Computer Vision for Tata Cliq, and automated SAP vendor master and repeat PO creation for Supermax from emailed attachments. - Mentored junior developers, monitored Orchestrator, and owned Go-Live documentation and best-practice standards.	
Software Developer Symtrax Software · Mumbai, India	Jan 2016 — May 2018
- Built Chorus Manager, the invoice upload and management utility for France's mandatory Chorus Pro B2G portal. - Developed StarQuery Suite, a BI tool for querying multiple databases from Excel under central governance. - C# .NET, WinForms, REST APIs, SQL Server and SQLite, with direct client interaction throughout.	
Software Developer CMC / Tata Consultancy Services · Navi Mumbai, India	Jan 2015 — Jan 2016
Worked on Genisys Configurator for ICICI Lombard, the platform underwriters use to generate insurance products, policies and customer schedules, in ASP.NET MVC over Oracle Enterprise.	

Certifications

- Claude Certified Associate — Foundations, Anthropic 2026
- UiPath Certified Advanced RPA Developer v1.0 2021
- UiPath Certified RPA Developer 2019
- Microsoft .NET Platform Certification, CMC 2014

Education

Recognition

- Customer Delight, UK/NL — NHS England delivery Sep 2023
- Customer Delight, UK/NL — NGH trusts delivery Jan 2023
- Service line award — NHS RPA infrastructure on Azure and COVID-19 PPE supply automation Jun 2020
- Service line award — Azure DevOps CI/CD and UiPath cloud infrastructure Sep 2019

- B.E. Computer Science, Gujarat Technological University 2014
- TechGig RPA Hackathon, 4th nationally Dec 2019
- Out of the Box award, Symtrax 2017

Community, writing and speaking

- **Master Coded Apps: From Fundamentals to Advance** — three-day virtual series for UiPath Community Mumbai, co-hosted, August 2026. Fundamentals, a live build against the SDK, and two apps shipped end to end by coding agents.
- **UiPath for Coding Agents** — UiPath Community Ahmedabad, July 2026. Generating UiPath workflows, agents and apps with Claude Code and OpenAI Codex, live.

Selected writing and open-source work — jdoshi2091.hashnode.dev

- **Coded Apps on UiPath, end to end** — built ClaimDesk, a two-screen claims-intake app in React and TypeScript, then documented the architecture, the six-step lifecycle, OAuth handling, hosting and the security habits worth adopting from day one.
- **Can one prompt build an entire application?** — the six layers behind a coding-agent system, how a master prompt becomes a dependency-aware task graph, and why verification separates "completed" from "working".
- **Agent skills: the operating manual for an AI worker** — what a SKILL.md is, how skills differ from prompts, tools and MCP, and the governance questions that surface when agents reach production.
- **Data Fabric migration tool** — open-source utility that exports, packages and imports UiPath Data Fabric entities and records across environments, with logging and reports.
- **Automation observability for external scripts** — a log-bridging pattern returning external Python and PowerShell logs to the UiPath job trail, published with a reference repository.
